

THORACIC CAGE JOINT TENDON TO PELVIS UPGRADE

by partworkupgrades

This upgrade will fix the wobble on the tendons from the thoracic cage joint to the pelvis. Tendons are completed on the T-800 during Hachette issues 53 and 54.

Simply follow the steps below to apply the new tendon plugs.

Pack contents - 3 x Plugs (1 spare)

STEP 1 - Removing Existing tendons

Begin by unscrewing and removing the tendons from the thoracic cage joint. You'll have on on both sides to the pelvis - remove both and dis-assemble, as per the figure shown in step 2.

STEP 2 - Re-assembling with plugs to tendon

Take the plug and insert as shown into the image.

Use a little glue to hold in place.

Now assemble the tendon by inserting the rod into the mouth of the upper tendon, so that the rod goes through and the new plug sits snug into the upper tendon part.

Screw everything back together and fit back to the T-800.

Congratulations, you've completed the upgrade and no more wobble!
